

## Heater Installation Instructions V1.1

1. Install power cord to heater. Note: Heater will only activate at temperatures below 48°F/9°C.
2. Clean the area where you are installing heater with alcohol or other household cleaner to remove any dirt or oils. Remove white backing on the Velcro coins.
3. Install heater with fan port facing upward and heater exhaust pointed towards side of The TV Shield in designated install zones on diagram.

**Please note:**

In extremely cold environments we recommend blocking side vents to hold in heat. Please be sure to remove anything blocking side vents during warmer conditions.

Keep heater as far as possible from sidewall.

Keep all power/component cords away from heating element.

The thermostat will turn on heater at 48°F/9°C and turn off when it reaches 52°F/12°C.
