

TVSPRO PORTRAIT HEATER INSTALLATION

1. Clean underside of Heater Assembly plate (opposite orange pad) with Isopropyl Alcohol

2. Clean **HEATER LOCATION** area (*identified below*) inside the back housing with Isopropyl Alcohol
3. Steel spacer blocks (2) contain an adhesive strip on two sides. Remove protective layer over adhesive on one side and adhere spacer to back of Heater on one end. Do the same on the other block and adhere spacer to back of Heater on the opposite end.
4. Remove protective layer over adhesive on exposed back of each block and adhere the heater approximately in the identified **HEATER LOCATION** area making sure the bottom edge is at least 1 inch ABOVE the two holes where the Assembled Internal Mount will be mounted into.
5. Once the TV has been installed, route the Heater Plug out under the side of the internal mount and plug into power strip.

**The built in thermostat will turn the heater on when the inside temperature reaches 40 deg. F and will turn if off once the interior temperature reaches 60 deg. F.*
